

Designer for Novell Identity Manager

Holger Dopp
MetaDirectory Architect
Novell, Inc.

Novell.

Content

- Complexity of Identity Management
- Evolution of Policy Management
- Comparison iManager vs. Designer
- Designer Overview
- Future of Designer
- Demo ?

Complexity of Identity Management

Complexity of Identity Management

Education

- Complexities of connected systems
- Limited number of trained consultants

Business Policies and Transformations

- Defined using Rules and XSLT Stylesheets
- XSLT not widely understood

Deployments

- Risks of provisioning corporate data
- Lengthy deployments
- Troubleshooting

N

Complexity of Identity Management

Deployments - cont.

- Debugging
- Staging
- Source management
- Documentation

Not unique to Novell

These issues cannot all be addressed by a single tool

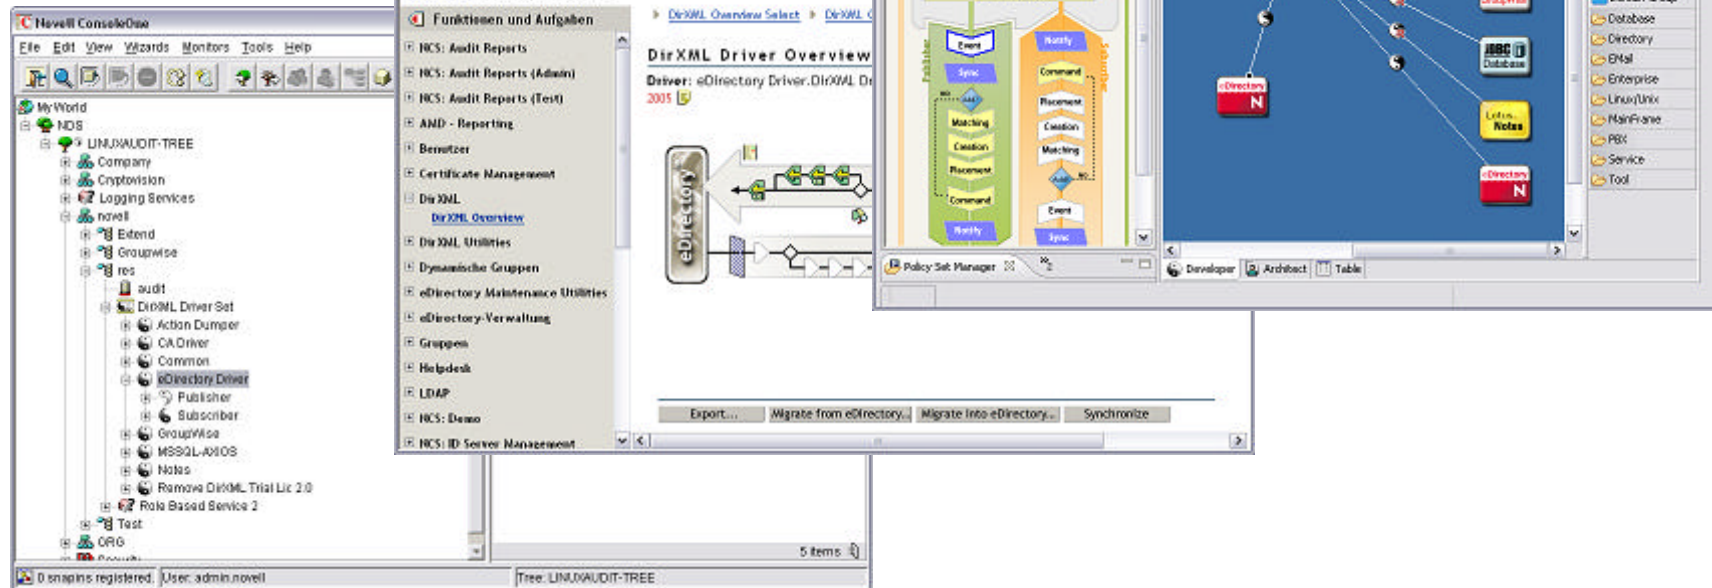

The Evolution of Policy Management

Evolution of Policy Management

Designer

iManager

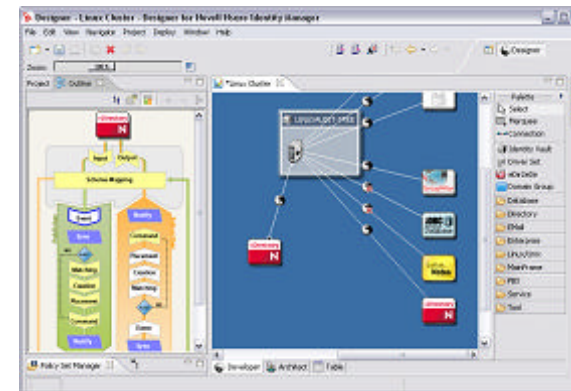

ConsoleOne

N

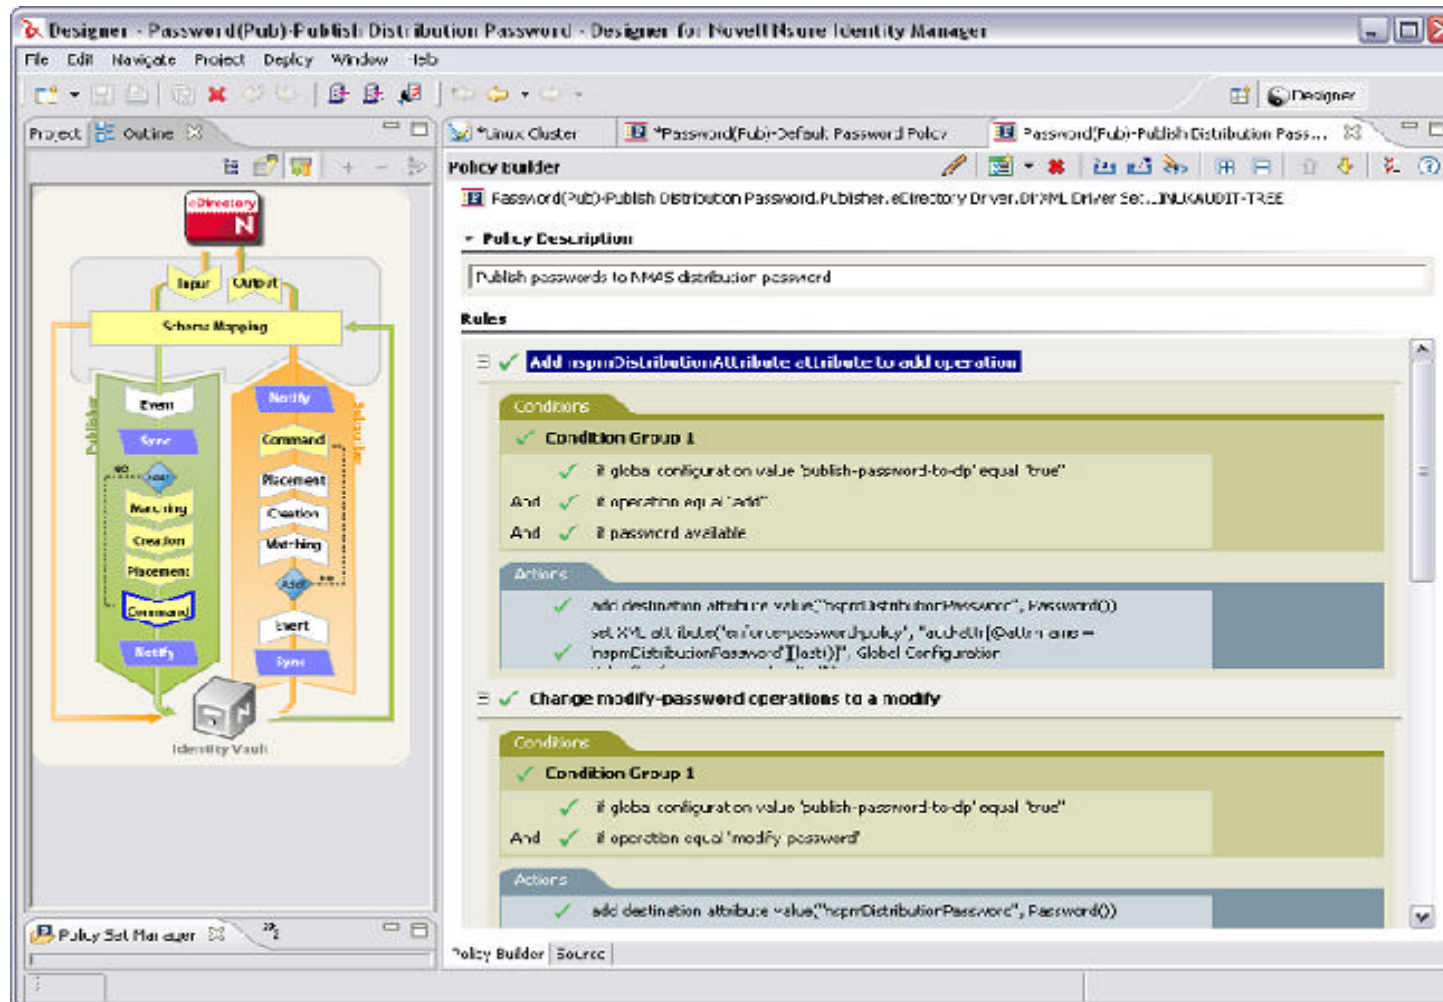

Designer based Policy Builder

- ❏ Eclipse-based
- ❏ Online and Offline access
- ❏ Individual installation necessary
- ❏ Platform independent
- ❏ Environment configuration based on local installation

N

Designer based Policy Builder

Novell.

N iManager vs. Designer

iManager

- Web-based central application
- based on Web application server
- only usable in online mode
- single tree focused
- allows only online deployment
- object oriented view only
- target audience:
 - Administrators
 - Developers

Designer

- local Eclipse based application
- no further software needed
- online and offline mode possible
- multi tree, multi project focused
- supports full project life cycle
Design, Deploy, Document
- object and application views
- target audience:
 - Architects
 - Consultants
 - Developers

Architecture Framework

Eclipse Workbench

What is Eclipse Workbench?

- An open source tool integration platform
 - Plug-In environment
- Open source product
 - Tools of all types can be developed
 - Identity management plug-ins are developed
- Java development environment
 - Integrated Development Environment
 - Eclipse was developed using Eclipse
- The Framework for Designer for Identity Manager

N Designer Architecture

High Level Architecture

- Designer is a higher-level framework built on top of Eclipse.
- Plug-ins can communicate directly to Eclipse API and/or the higher level Designer APIs.

Functions

Functions

Project Management

Enterprise Modeler

Configuration Management

Dataflow Modeler

Policy Management

Policy Debugging

Directory Tools

Documentation

N

Functions - Project Management

- Create new projects from

- scratch

- Identity Vault

- saved projects

- Copy existing projects

- Delete projects

Functions - Enterprise Modeler

- shows the big picture of the project
 - architectural view
 - high-level design of project components
 - development view
 - DirXML specific operations
- supports various types of operations
 - change icons
 - group objects
 - change view order
 - will be enhanced in future versions

N

Functions - Enterprise Modeler

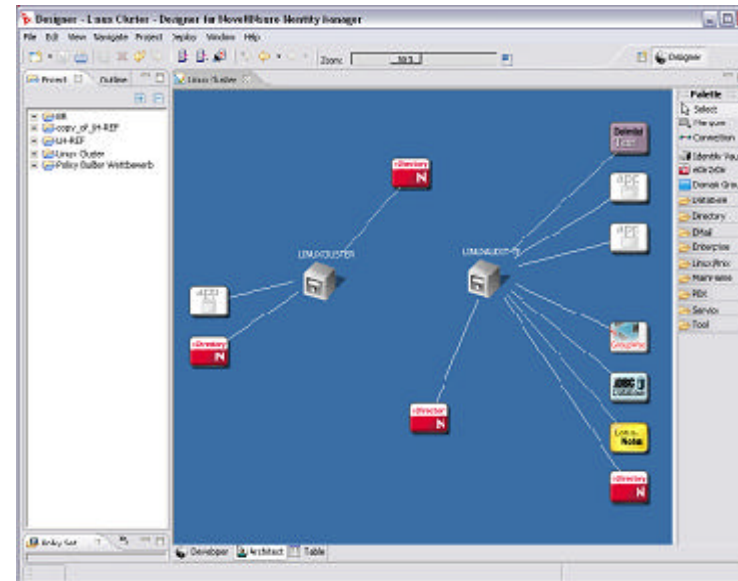

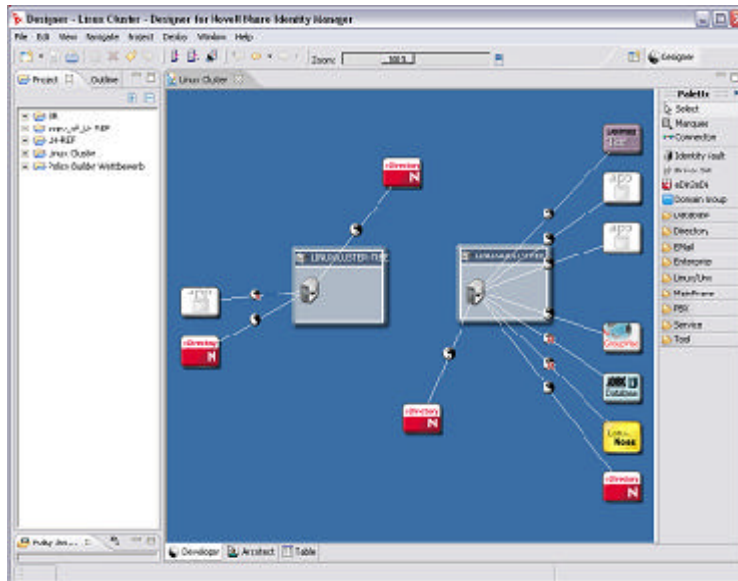

• Development view

- object oriented view
- object oriented operations

• Architectural view

- high-level design of project components
- application oriented view

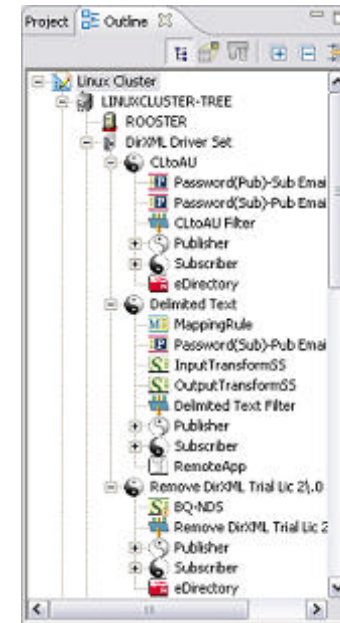

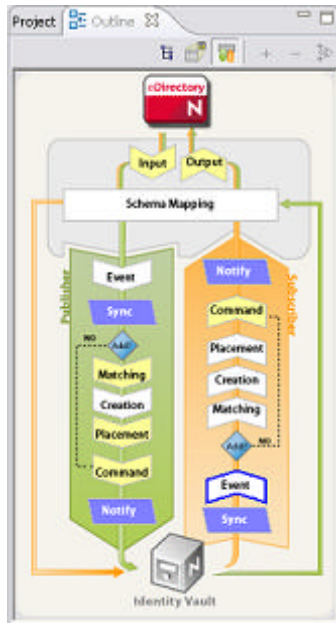

N

Functions - Enterprise Modeler

- multiple views to the project content
 - **modeler** - project overview
 - **data flow** - data (object, attribute) oriented view
 - **policy flow** - policy fish bone view
 - **outline** - directory object related view

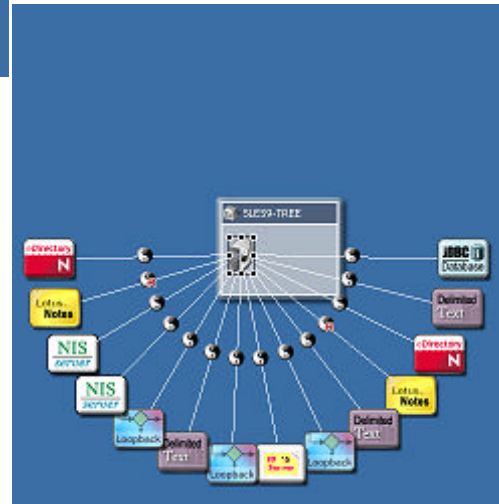

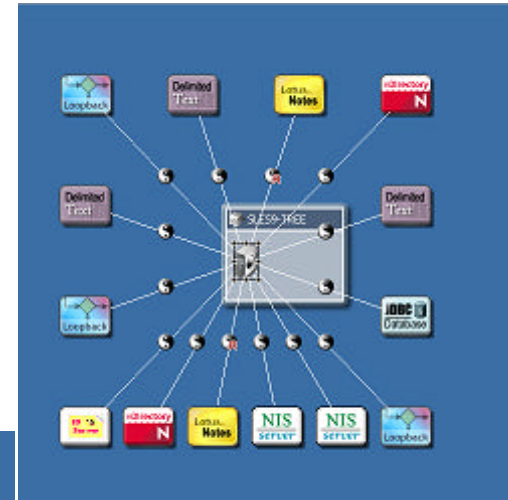

Functions - Enterprise Modeler

- various types of modeling operations
 - drag and drop objects
 - connect, re-order objects
 - build groups of applications
- provides access to all Designer functions
 - context specific
 - menu controlled
 - wizard controlled

N

Functions - Enterprise Modeler

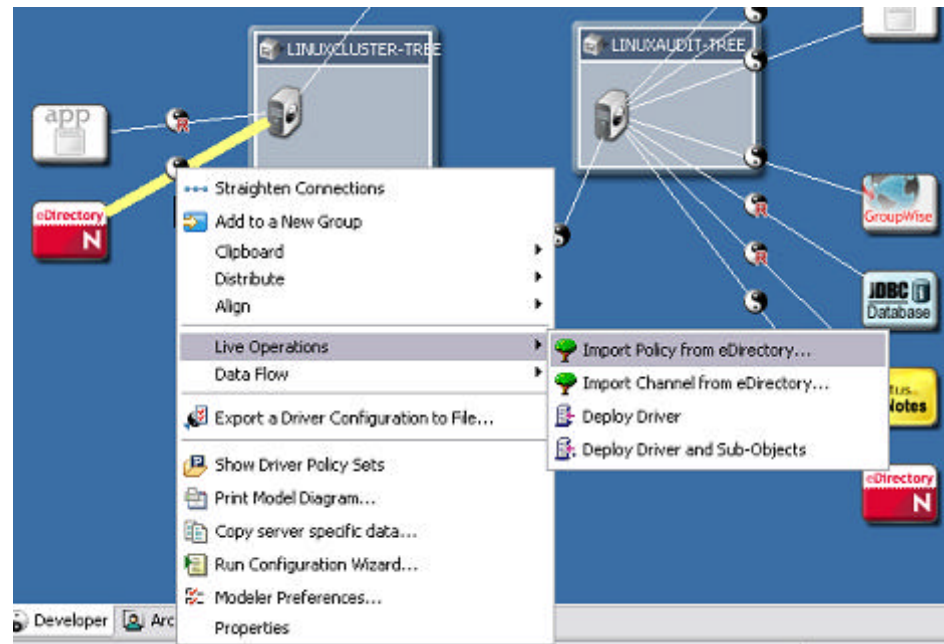

Functions - Configuration Management

- import/deploy/export of objects and structures
 - Live System
 - Driver Configuration File

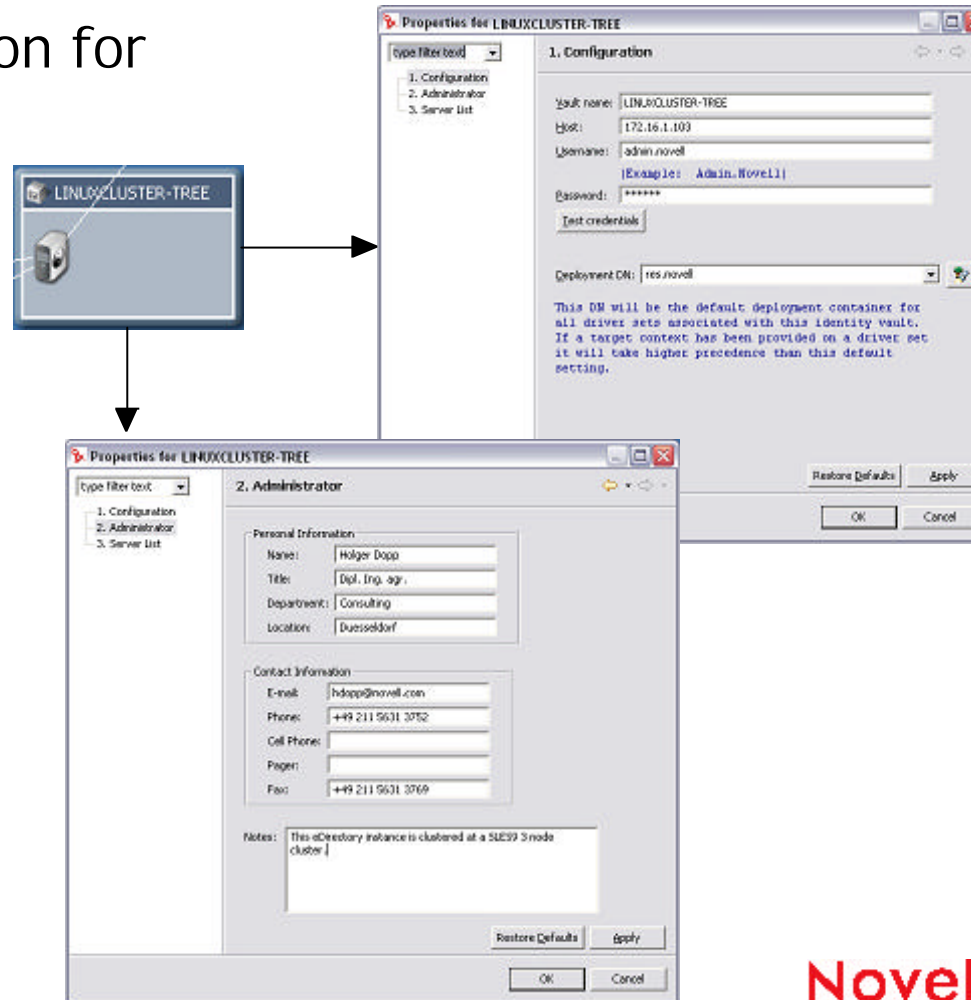

N

Functions - Configuration Management

- detailed information for

- Applications
- Identity Vaults
- Servers
- Driver Sets
- Drivers

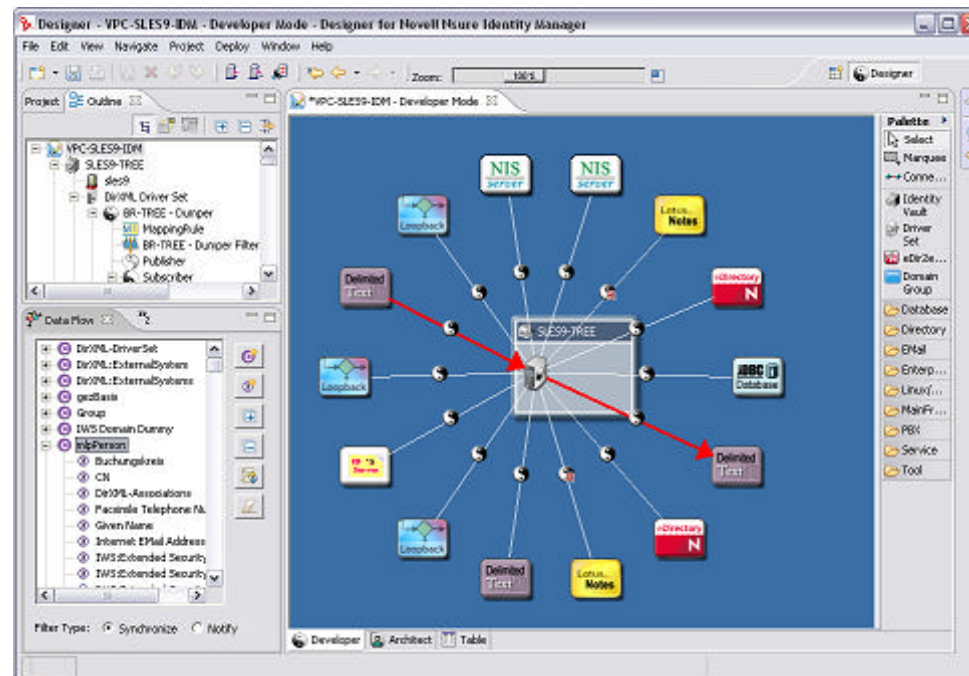

Novell.

N

Functions - Dataflow Modeler

- shows global dataflow of objects and attributes

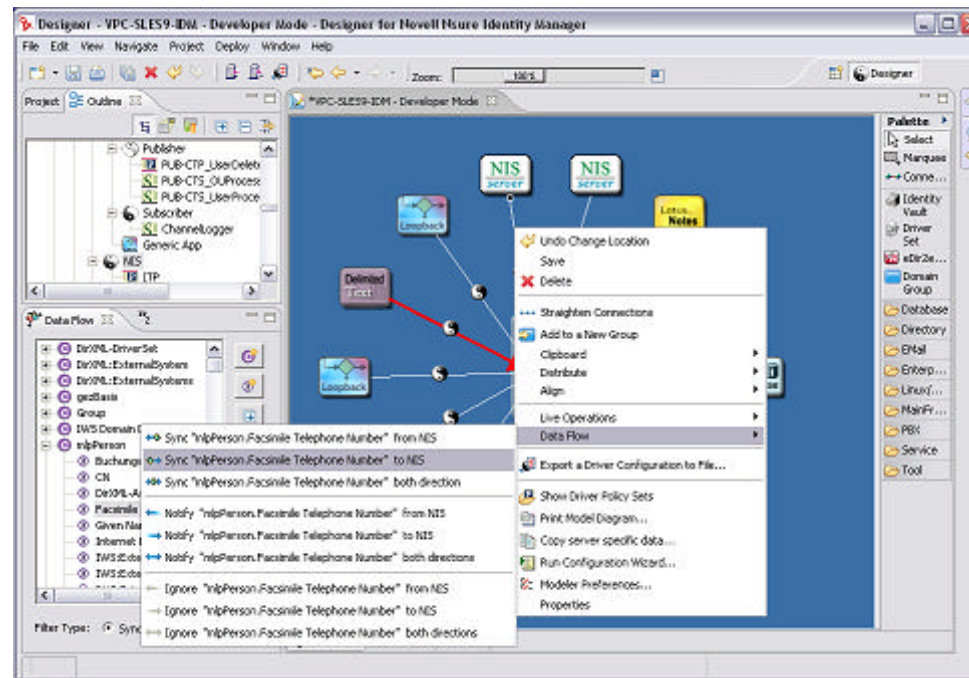

N

Functions - Dataflow Modeler

- allows management of dataflow for classes and attributes

Functions – Policy Management

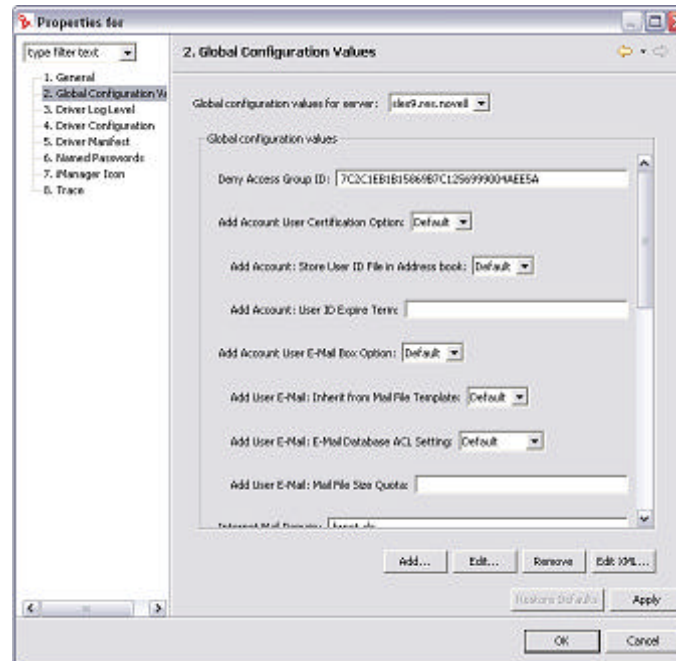

- allows management of
 - Global Configuration Values
 - Filter Policy
 - Mapping Policy
 - Transformation Policy Sets
 - Input, Output Transformation
 - Event, Command Transformation
 - Match, Create, Placement Rules

N

Functions – Policy Management

- Global Configuration Values
 - global and Driver specific GCVs
 - import/export of GCVs

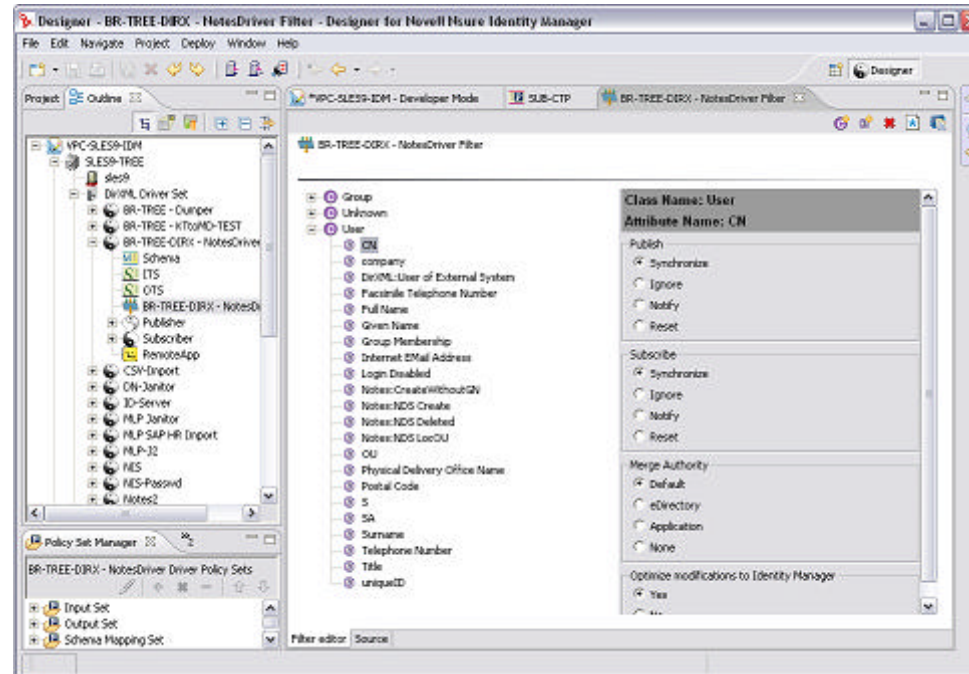

N

Functions – Policy Management

- Filter Policy
 - add, modify, change filter settings for classes and attributes

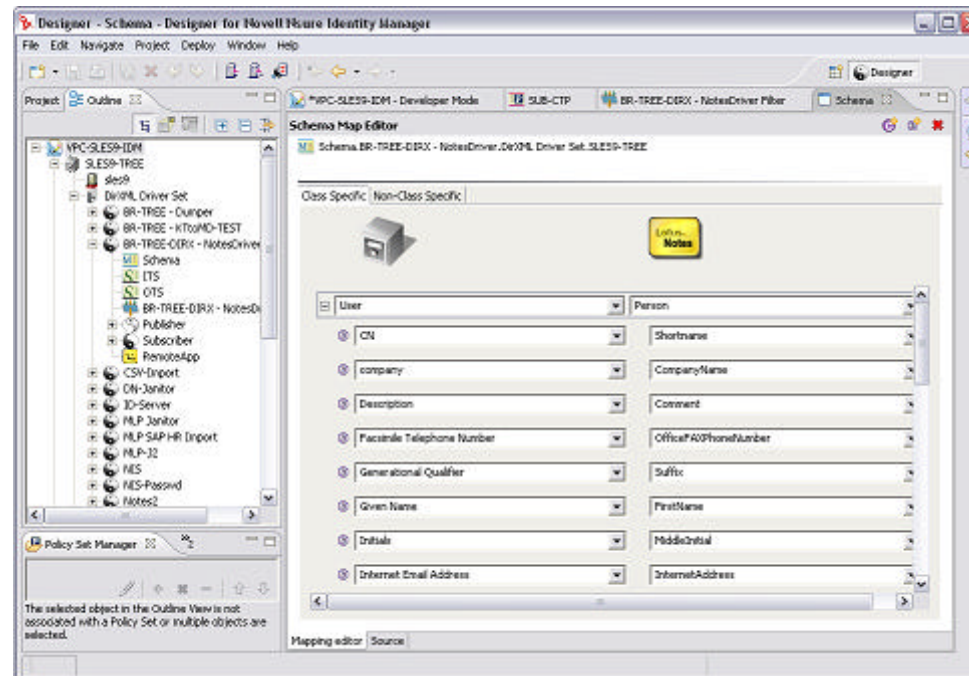

N

Functions – Policy Management

- Mapping Policy
 - add, modify, delete object and attribute mappings

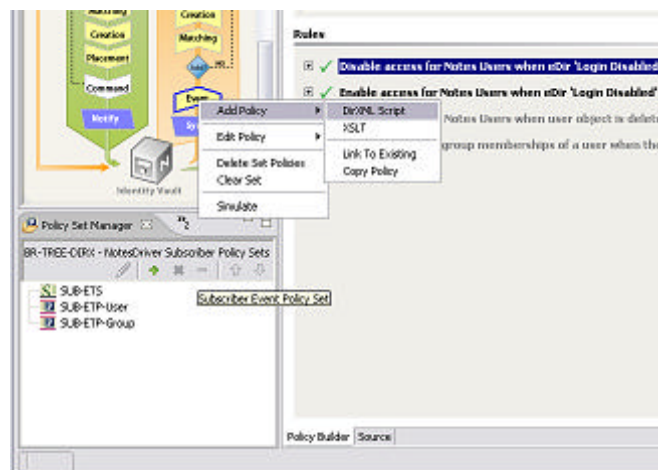

N

Functions – Policy Management

- Transformation Policy Sets
 - add, modify, delete Policies
 - supports XSLT and DirXML Script
 - allows access to Policy Simulator
 - change policy order

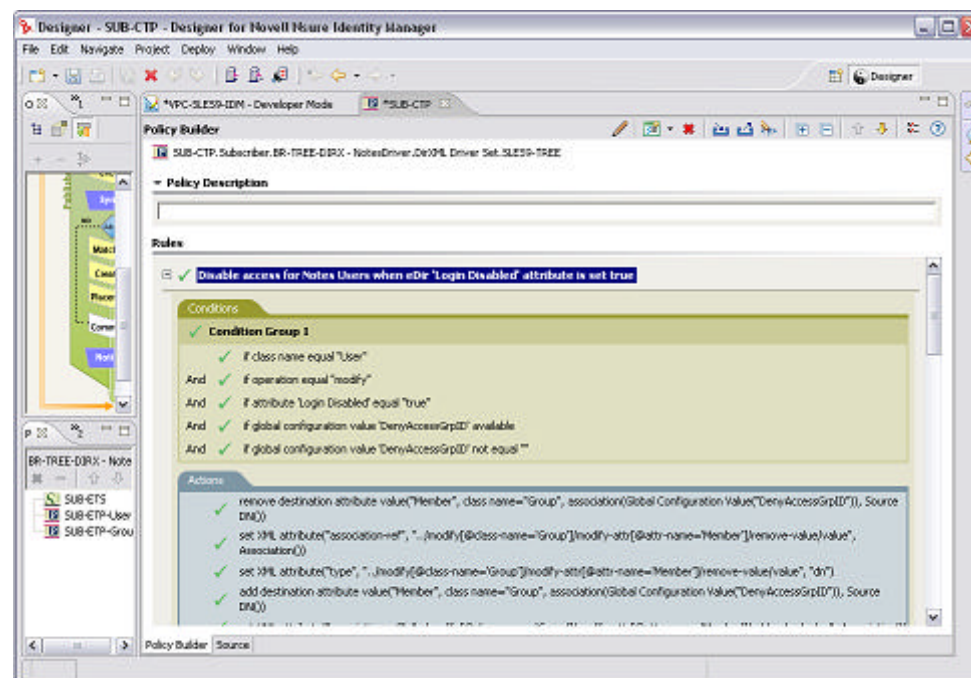

N

Functions - Policy Management

- Transformation Policy Sets
 - add, modify, delete Rules using Policy Builder

N

Functions - Policy Management

- Transformation Policy Sets

- predefined operations for

- Match,

- Create and

- Placement Policies

N

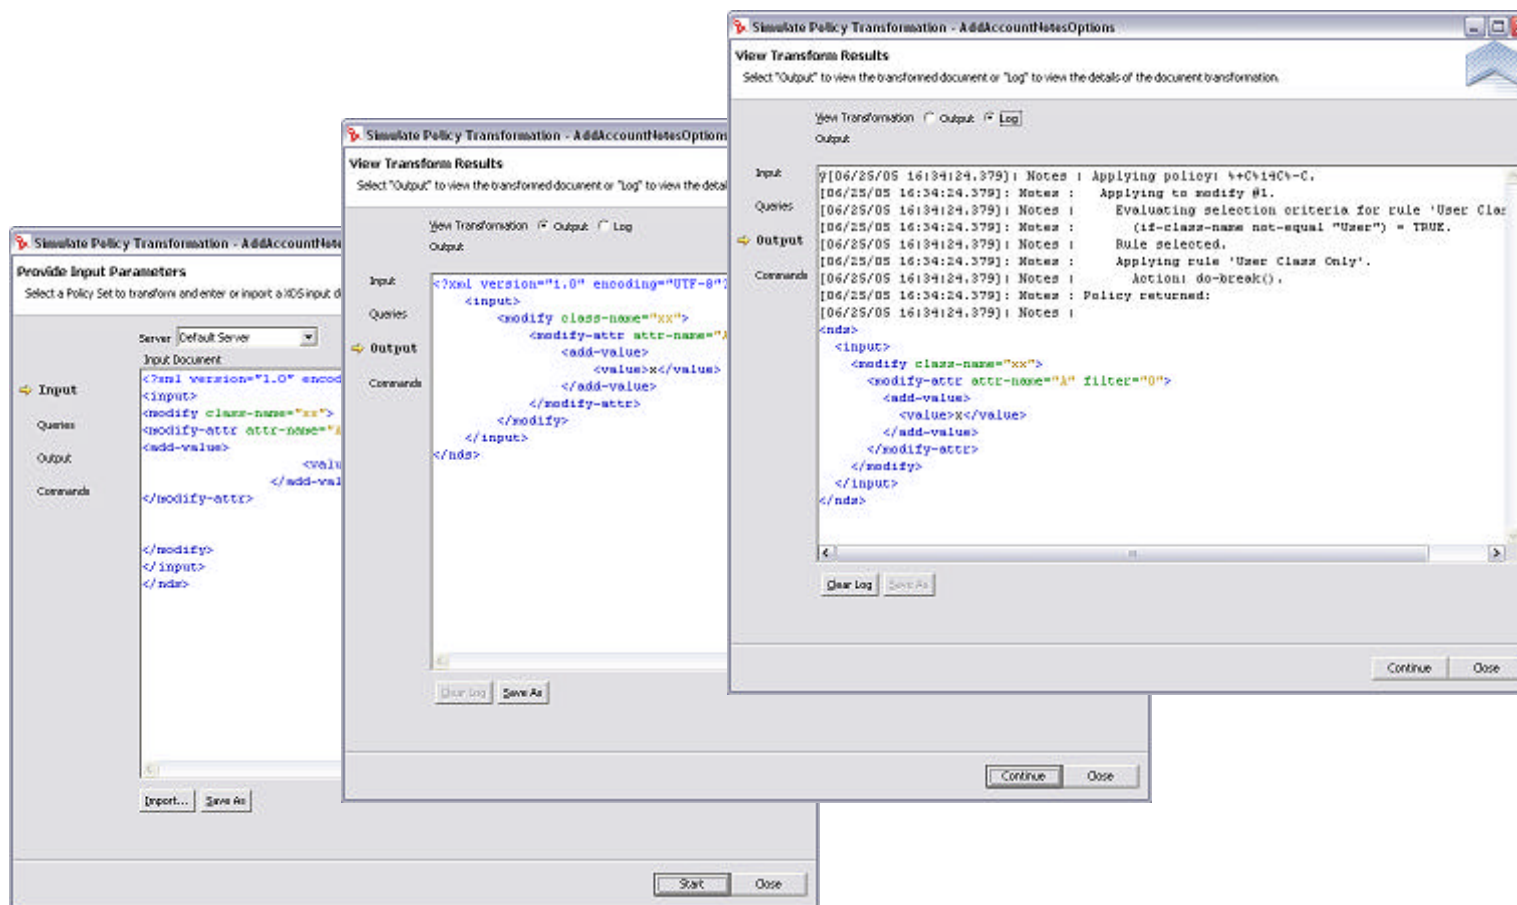

Functions – Policy Debugging

- simulates the DirXML engine
- uses customizable input XML data
- allows query simulation
- shows output and trace log
- allows the usage of IDM delivered java classes
- simulation per Policy Set

N

Functions – Policy Debugging

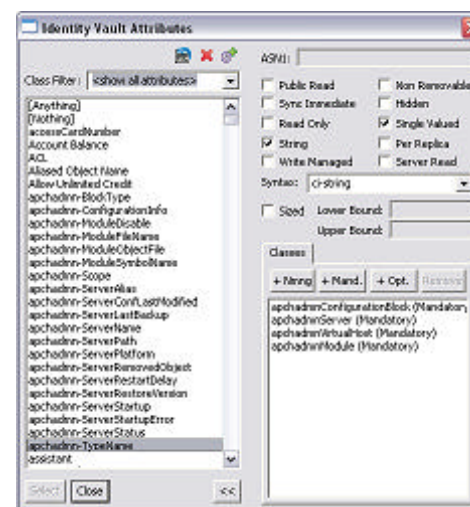

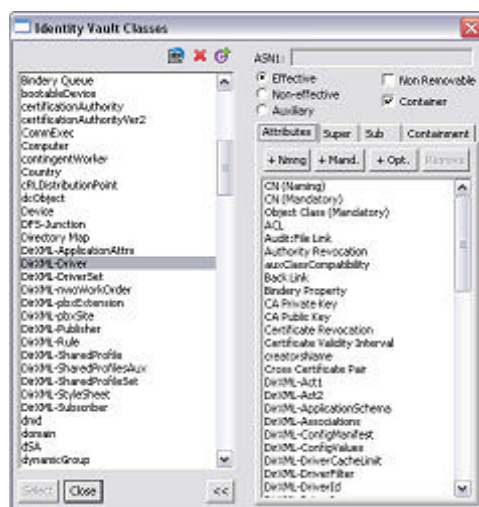

N

Functions - Directory Tools

- Schema Management Tools
 - Import Schema from eDirectory
 - Manage Schema Classes and Attributes

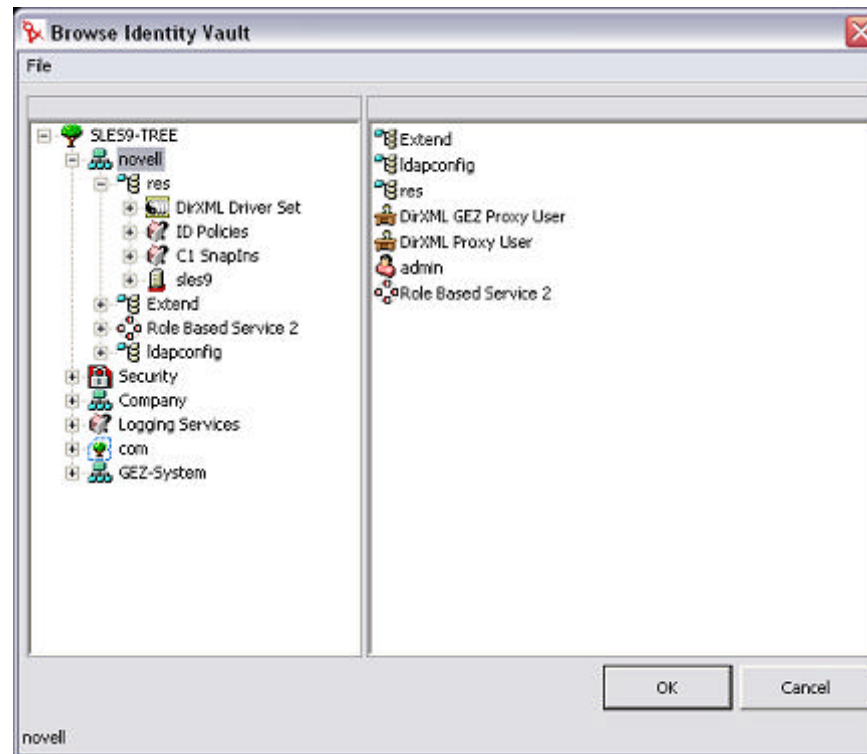

Functions - Directory Tools

- Browse Identity Vault

N

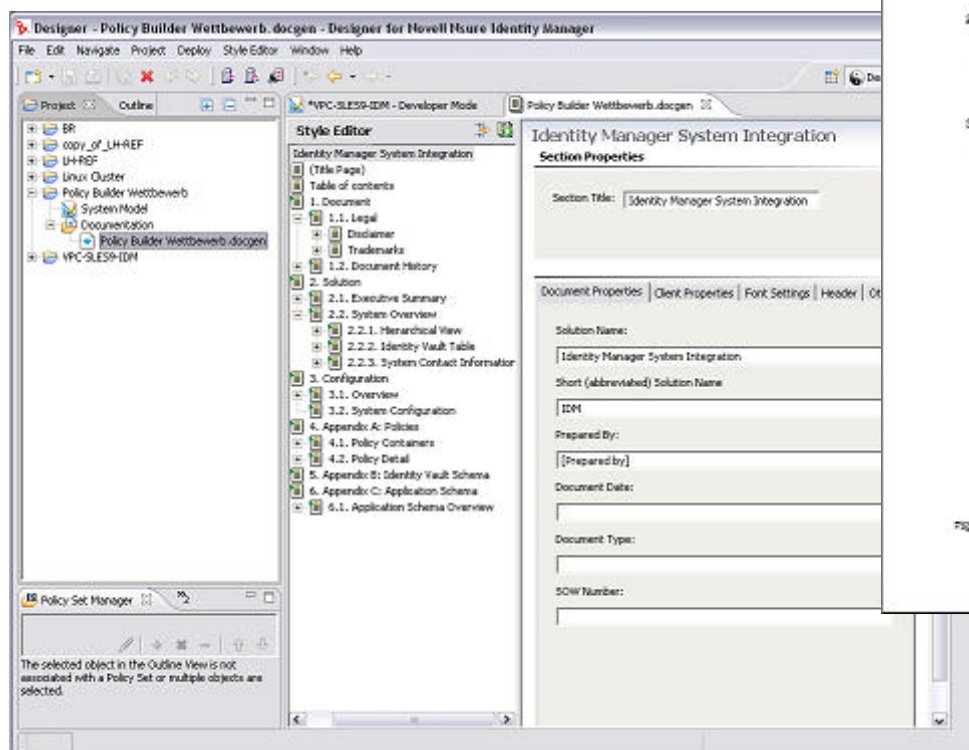

Functions - Documentation

- Create technical documentation of the project
- Output format PDF
- Output content can be customized and controlled using Designer document generation wizard
- low level customization using XSL:FO (formatting objects)

N

Functions - Documentation

Identity Manager System Integration		Novell

Future of Designer

Future of Designer

- Release v1.0, Q3/2005
- Designer v1.1 as part of IDM3
 - Provisioning Modeler
 - Entitlement Modeler
- Designer v1.2 as part of IDM3 Provisioning Edition
 - Approval Flow Modeler
 - Extended Provisioning Modeler

Future of Designer

- Designer v2.0
 - Policy Template Library
 - Data Scrub & Analysis
 - Version Control Integration
 - Live Mode
 - Test Case designer
 - Data Flow auditor
 - and others

Can't wait to play with

N

Designer for IDM - Download Page

Current milestone builds are downloadable at
<http://www.novell.com/cool solutions/dirxml/designer/>
for testing purposes.

Last milestone build M4 from May 31, 2005.

Demonstration

Demonstration

- Create an offline model in Architecture Mode
 - HR, Directory, Mail
- Assign and change Driver configuration
- Assign real environment properties
- Deploy system
- Generate a documentation
